

Alpha Trainer Next Version Wish List

1. The list of control points for the AoA LED instrument need to be variable since not all planes stall at the same AoA.
2. Is it possible to miniaturize a side view of AT3D and make it into an instrument on the panel----our own AOA gauge?
3. I would like to add something to the "Wish List" if possible. Because I demonstrate AT in the full screen view I would like you to add another box, about the same size as the data box, or smaller, that has an attitude indicator in the middle and with airspeed, altimeter, vertical speed and heading numbers around it (slip skid ball?). The reason for this is that the FAA maneuvers required for check rides are better demonstrated and understood with this outside view, especially with the AT system on. I know that the split view will do the same thing in most airplanes but this keeps it simple for the student
4. If possible it would be nice to have individual thrust vectors for each engine. I don't think we would ever use more than two engines.
5. Look at having the Logo in external views.
6. Make an optional (configurable) "plane" protractor and lift vector - this is so we have something that will show in the X-Plane replay mode.
